Grids › Status grid

In this view

One colour per cell: ok, warn, danger or no data. -SelfDiagonal hatches the cells where row and column are the same thing. A cell can carry a Glyph, a Tooltip, a Detail (opens the side panel) and a link to a table.

DC04	EU	OK

Grids › Heatmap

In this view

A number per cell on a colour scale. Sequential for "how much" (low to high); diverging for "above or below a midpoint". -ShowValues prints the numbers; -Unit adds a suffix.

Maps › Tree

In this view

A tree has exactly one parent per node: forest, domain, controller. Pan and zoom with the buttons, the wheel or a drag; the + and - on a node fold its subtree. A node can link to a table.

Forest

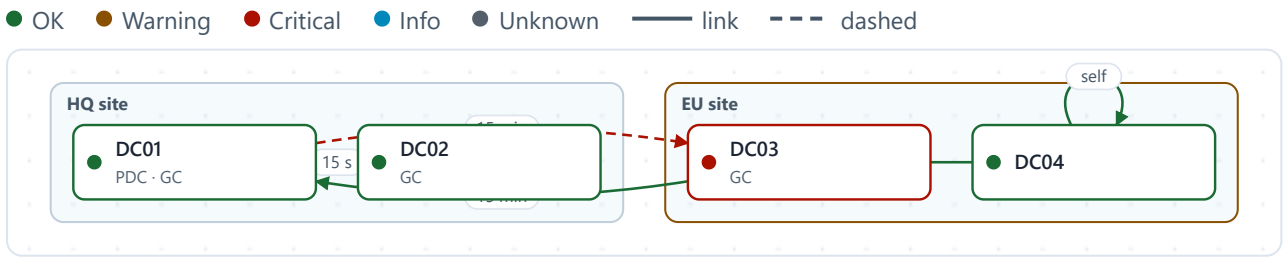

Maps › Network, grouped

In this view

Not a tree: any number of links, parallel links between the same pair, a direction (arrowheads), a label, a colour and a dashed style. Groups draw boxes (they can nest). Use the chips to filter by status or badge, the box to find a node, and click a node to highlight its links and open its detail.

Replication links

Maps › Network, tiers

In this view

Layered layout: lanes by Tier (0 on top). A node without a Tier takes its depth from the links. Mark the nodes you care about with Target, switch on "Trace path", click a workstation, and the shortest route to the nearest target is highlighted and spelled out.

How a workstation reaches Tier 0
